Sign-In to a Zoom Meeting That Requires Authentication

Some Zoom meetings may require you to authenticate with your UA NetID credentials to join the meeting. It is always best practice to get in the habit of signing in to your Zoom desktop client with your UA Zoom account so that any meeting you are attending you are signed in with your UA account. The instructions below will demonstrate how.

1. If you click on a meeting link that requires authentication it will prompt you with a message informing you that the meeting is for authorized attendees only. When you see this prompt, select the **Sign in to Join** button.

2. The next prompt will be the Zoom login screen. Select the **Sign in with SSO** button.

3. The next prompt will ask you for your company domain. Type **arizona** in the company domain box. Select the **Continue** button.
4. The UA WebAuth screen will appear. Type in your **UA NetID and password** in the fields provided and select the **Login** button. You will likely then have to go through the NetID+ authentication. After that you will be logged into the Zoom meeting with your UA Zoom account.
